Trelleborg

TM3000 for sustainable farming

The TM3000, designed according to the Blue Tire Technology, is the Trelleborg's answer to the latest and future generations of harvesters, combine machines and spreaders. A new tread pattern, along with the advanced carcass design, maximise the load capacity of the tire at low inflation pressure.

The TM3000 respects the soil and boosts crop yield while preserving the environment. Matching sustainable and precision farming approaches, it is the right choice to increase the productivity of your farm, lowering overall operating costs whilst looking after the safety and comfort of the operators.

**HIGH
STABILITY**

**SUPERIOR
FLOTATION**

**RESISTANCE
TO STUBBLE DAMAGE**

**EXCELLENT
SELF-CLEANING**

TM3000 for harvester and combine machines

- 1 Sharp inclination of the lug to provide excellent stability on slopes.
- 2 Inter-lug terracing at the base of the lug to maximise the self-cleaning capability of the tire.
- 3 Increased lug base diameter to improve manoeuvrability and reduce stress in the shoulder area.
- 4 Rounded shoulder profile, to prevent stubble damage, results in high durability.
- 5 Rounded lug base to support the tire during combine steering.

Extra wide footprint

The latest tests performed show that the TM3000's footprint is up to 5% wider than its premium competitor. The larger contact area significantly reduces soil compaction, providing high flotation characteristics, respecting the soil and preserving its organic life.

Footprint comparison - Index

Higher is better

**Up to +5%
wider footprint
vs. a Premium Competitor**

Reference size: IF 800/70R32 CFO
Tire Load: 13,175 kg
Field conditions: 15 Cyc
Inflation pressure: 2,4 bar

Flotation comparison - Index

Lower is better

**+5% flotation
vs. a Premium Competitor**

TM3000 for spreader and sprayers machines

The new generation of spreaders and sprayers show an increasing need for carrying higher loads, while constantly reducing the contact pressure on the field, to limit soil compaction during operations.

1 Higher number of lugs compared to main competitors available in the market, improving wear.

2 Wide width for maximum flotation and minimum soil compaction.

3 Extra lug, in addition to the interlug terrace, to enhance the self-cleaning capability of the tire.

4 Rounded shoulder for maximum soil respect.

5 ProgressiveTraction® design, to boost traction as well as regular wear.

Low soil compaction

The TM3000 offers the benefits of the VF construction and, compared to a non-VF option, it allows the machine to carry up to 40 percent more load at the same pressure, or to inflate the tire with up to 40 percent less pressure while carrying the same load. In addition, the ProgressiveTraction® technology applied on the tread increases traction and helps protecting the tire from stubble damage, thereby improving road wear resistance and comfort. The rounded shoulder of the tread makes the TM3000 very respectful on soil and grassland, and improves machine handling.

**Wide footprint area,
low soil compaction**
